

Is your Business Intelligence solution a mission-critical application driving business performance?

Is the increasing demand pushing your support team to its limits allowing only for reactive management of your BI system?

With SAP BI PerformanceShield, you can ensure your BI application is performing to the maximum at all times.

Maximize the Potential of Your BI System

Effective management of your Business Intelligence (BI) system is critical to ensure your organization is getting the maximum value from its investment. Clariba's SAP BI PerformanceShield provides you this assurance by monitoring, analyzing and maintaining the health of your BI system. Get a 360-degree view of the usage of your BI applications, prevent bottlenecks and proactively take action — ensuring business user satisfaction and optimal performance and ultimately improving business decisions.

Benefits of SAP BI PerformanceShield

Optimize your licensing – Measure your Active / Inactive / Concurrent Users

Scale your BI servers – Jobs running, failing, average report execution time

Optimize your environment cleaning out-of-date content – Track most used and unused reports

Measure system usage – Analyze and segment your userbase depending on their activity, identify reports they interact with and the tools they use

Minimize the impact of changes – Execute impact analysis of changes to universes and reports and identify reports with lost references

Evaluate your security model – Gain insights to your user access matrix by folder and user/group structure, detect explicit rights for users to drive best practices

Forecast storage space needs – Analyze the trend of storage space used with your BI system

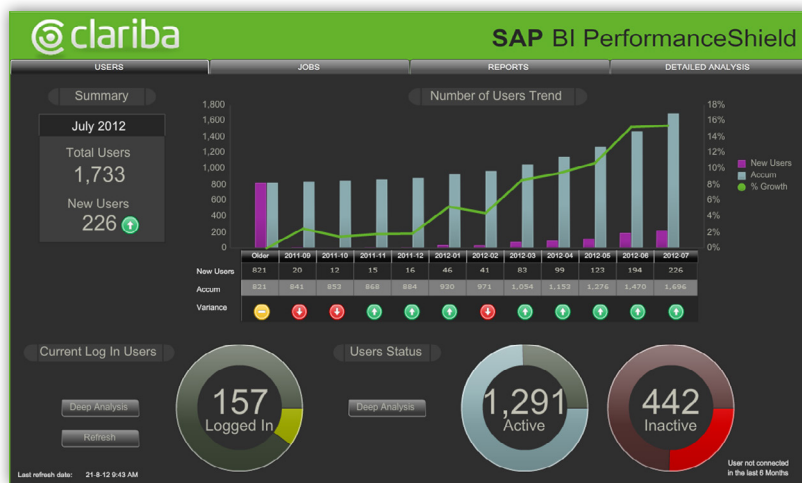

Anticipate system issues – Detect failed instances before your users do

Detect performance challenges and end-user behavior – Identify end-users running complex jobs and key reports requiring optimization and system challenges

SAP BI PerformanceShield in Action

Our full solution integrates seamlessly with your SAP BusinessObjects BI implementation. SAP BI PerformanceShield is active from the minute it is installed within your environment, allowing your organization to start moving from reactive maintenance to monitoring, analyzing and proactively managing your BI solution.

Leveraging the SAP BusinessObjects Audit database and the power of real-time access to the SAP BusinessObjects Central Management Server (CMS) database, it extends and complements the existing monitoring capabilities of your SAP BI solution. With SAP BI PerformanceShield, your BI team now has a 360-degree view of the BI system at its fingertips.

Comprehensive Dashboard

At the heart of the solution is a comprehensive dashboard that provides the necessary insight to the evolution and health of your BI solution. It covers the key application focus areas needed to monitor your system: Users, Jobs and Reports.

Detailed Reports

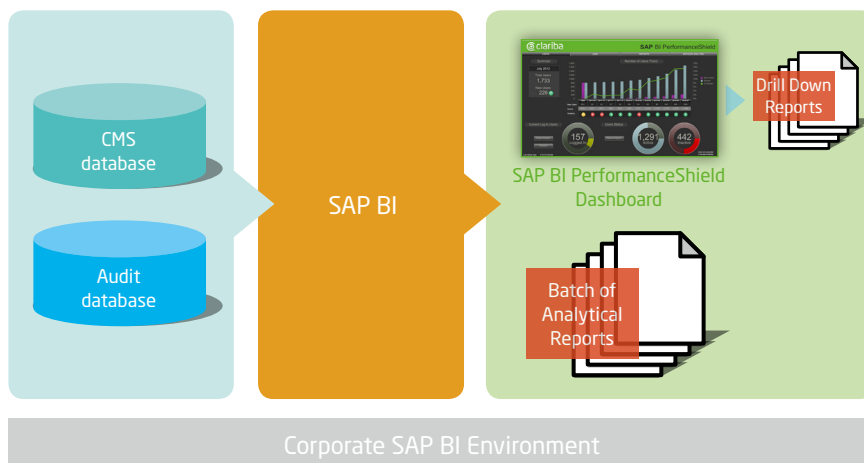

Further key analysis is provided through detailed reports published on your BI platform. These flexible drill-down reports allow your BI team to analyze in even greater detail the situation of your BI System.

Up and Running in No Time

With our solution implemented in a matter of hours, your organization can quickly focus on reducing bottlenecks, improving performance, and delivering proactive maintenance to drive end-user satisfaction and ensure continuous business value from your SAP BI implementation.
